

Production Unitary Enterprise “Gomeloboi” was founded in 1927. It is one of the largest wallpapers producer on the territory of CIS (Commonwealth of Independent States).

The goods are certified due to State Standard 6810-2002(EH 233-89). The system of the quality and production management corresponds to international standard ISO 9001 (the conformance certificate was given by the State Standard of Belarus in 2002). All products have CE marking. Modern equipment and advanced technologies in aggregate with great experience of our specialists is a guarantee of our high quality products.

One of the main advantages of “Gomeloboi” factory is their high artistic level and durability. More than 400 designs of wide color range and different design schools were developed. There are wallpapers for living rooms: sitting room, hall, and kitchen, for other rooms, for office and so on. The production range is widely increased by means of their improving using gravure embossing, pearl and PVC coating.

“Gomeloboi” produce the next kinds of wallpapers:

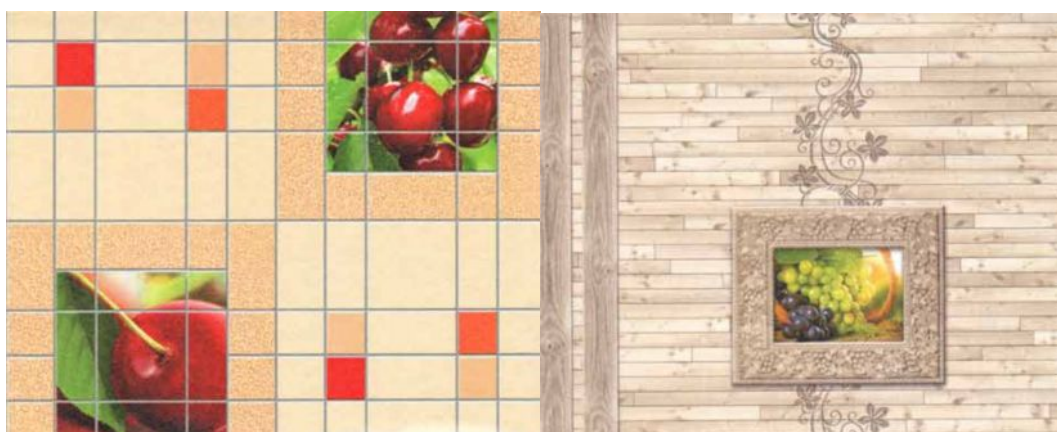

- **Corrugated wallpapers, including wallpaper with metallic inks added.**
- **Moisture-proof wallpaper, including wallpaper with metallic inks added.**
- **Moisture-proof in-register and free embossed duplex wallpaper,**
- **Embossed Duplex wallpaper with non-woven backing (FIRST IN EUROPE)**
- **Foaming wallpaper (with acrylic foam application),**
- **Vinyl wallpaper with paper and non woven backing,**
- **Hot embossing vinyl paper based wallpaper,**
- **Wallpaper based on non-woven material (flizeline),**

To improve the appearance, high quality and durability of our wallpaper we use special varieties of decoration: pearl pigments (iriodins), metallic inks, environmentally safe lacquer, and so on. Below you can see some examples of our products:

Waterproof wallpapers

Moisture-proof wallpapers are intended for places with potential water ingress on the walls. The designs imitate glazed tile, marbled and wooden covering.

Light and calm style of this kind of wallpapers gives possibility to use them with all kind of kitchen furniture. All surface of moisture-proof wallpapers are covered with different kinds of water-proof latex or varnish. Thanks to this you can wash wallpapers with water or with suds.

Duplex/embossing wallpapers

Duplex wallpapers with in-register and free embossing gives feeling of three-dimensional of the surface.

Duplex wallpapers are produced by glueing of two paper layers and further embossing, that gives deep and steady relief.

Due to high destiny of paper, duplex wallpapers can obscure little defects of the wall. This kind of wallpapers will make you rooms more cosy and comfortable.

Foaming wallpapers

Foaming wallpapers – wallpapers that produced with application of acrylic foam. This kind of wallpapers has different level relief image, with resistances to mechanical damage and humid environment.

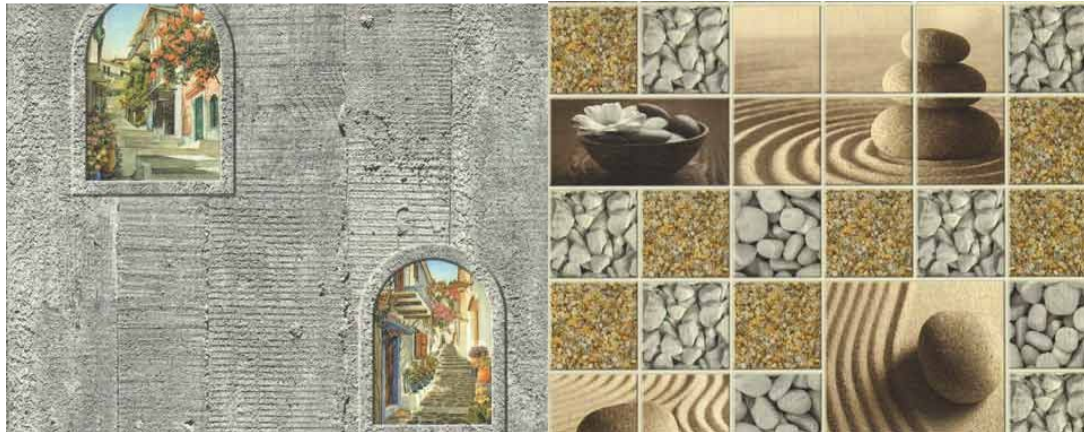

Foaming wallpapers are produced on modern printing machines "FISHER&KRECKE", with application of import, ecologically safety acrylic foam.

Vinyl wallpaper

Vinyl wallpapers are very popular because of their durability and resistance to mechanical damage. **This kind of wallpapers also has excellent light resistance and can be washed!**

Vinyl wallpapers like a duplex consist of two layers. The paper or non woven base covered with a thin layer of PVC. Then drawing a design and putting through high temperature for a foaming.

Hot embossing vinyl paper based wallpaper

Hot embossing vinyl wallpaper also are very popular on the wallpaper's market. The purpose of heat embossing a vinyl is to convert a smooth plastic wallcovering into a wallcovering that has a third dimension. This textured "relief" may be as smooth as a light sand emboss or it could be a heavily textured "rough" emboss that has a visual and tactile effect.

Non-woven wallpaper

Nowadays non-woven wallpapers become more and more popular.

This kind of wallpapers can be of a white color – for painting, and also of a different colors.

The base of non-woven wallpapers is a material with special, unusual properties:

- very easy in use;
- During gluing to the wall you should put glue only on the wall;
- don't become deformed when wet;
- hide a little defects of the wall;
- has high level of air permeability after painting;

- ecologically clean;
- if necessary can be painted several times;
- removed from the wall dried without rests as usual wallpapers.

Non-woven wallpapers gluing on all kinds of inside plasters, concrete walls, gypsum plasterboard and also all kinds of wood and wood-particle boards.
