

The Unitary Enterprise «Vitebskoblgas» is a compound, versatile and technically highly equipped company. In 2007 our enterprise was reorganized, three peat-extracting plants situated in Dokshicy, Chashniki and Shumilino regions of Vitebsk oblast of Belarus came into the membership of «Vitebskoblgas».

In 2011 a new plant for the production of nutritive substrates and peat moss was put into operation. The plant is equipped with modern high-tech machines produced by the company Premier Tech.

Substrats are produced on the basis of peat and Holland fertilizer «PGmix». They are used for growing seedlings of vegetables, flowers, trees and bushes, loans and also for soil structure improvement. Composition: peat moss with 5,5-6,5 pH acidity, mineral fertilizers mg/100g of dry substance: Nitrogen (N) 170-270, Potassium (K<sub>2</sub>O) 200-340; Phosphorus (P<sub>2</sub>O<sub>5</sub>) 110-190 and a complex of microelements (MN, MO, CU, FE, B, ZN). Package: plastic bags of 5l, 10l, 20l, 55l, 100l, 250l, Big Bale.

In the production of peat White as well as Black peat is used.

Radioactivity of the product is within acceptable limits, incorporating wood is up to 1%, and the content of organic matter - not less than 95%.

For the production of substrats bark, clay, sand, vermiculite, dolomite, perlite, expanded clay and other components are used. Release of the substrates on the customer's formulation is also possible.

Our company works with customers directly!
