To whom it may concern.

Belreahim Company was established in 1947, it is one of the leaders among companies selling chemical agents and fertilizers in the Republic of Belarus. The company has its own warehouses and office in Minsk that allows you to quickly deliver the goods across the country.

Because of many years experience and high professional level we have gained a reputation of a reliable partner with clients in the neighboring countries such as Russia, Kazakhstan, Ukraine, Lithuania, Poland etc. At the present moment Belreahim JSC has **three sales departments**: chemical agents, laboratory equipment and fertilizes:

- **Chemical agents and substances** – necessary for chemical tests, which are carried out in laboratories and medical establishments; every batch is checked for compliance with the state standards and delivered to customers in immaculate condition.

- **Fertilizes** – we produce and sell fertilizes applied to the soil to promote vegetables, fruit, cereals and bean cultures growing. Our company produces a series of fertilizer mixtures ‘Effect’ (approximately 17 items), fungicide ‘Azofos’, plant growth stimulant ‘Epin’ and other organo-mineral fertilizers for better growth and development of plants. We have got necessary permissions for their export (certificates of origin, quality certificates and phytosanitary permissions).

- **Laboratory equipment** - made of glass, porcelain and polymer materials; laboratory instruments and facilities, laboratory furniture and individual protective devices (glasses, gloves, boots covers and other items) are available.

As an export company Belreahim JSC is able to deliver any Belarusian products you are interested in. Also **we are looking for new suppliers of chemicals and equipment and ready to consider business as an official representative or dealer**. We should be grateful for the system of discounts and deferred payment.

We are open to any of your business proposals and requests.
